

# Matlab extracts RGB+D+IMU+pointClud from the frame data of D435i

Wakaya ✅

Technical Director of Guangzhou Aosheng Robot Technology Co., Ltd.

1 person agreed with the article

It took three days to finally get this function. This is very important for our current 3D measurement and modeling system.

Among them, for each small pit, I have linked to the corresponding technical blog, hoping to help my colleagues in this work.

## 1. RGB and Depth

RGB+D is the standard configuration of the D400 series, and after data analysis, there is no need for more format adjustments. The simplest.

```
%% 采集RGB影像信息
% Select depth frame
rgb_image = fs.get_color_frame();

% Get actual data and convert into a format imshow can use
% (Color data arrives as [R, G, B, R, G, B, ...] vector)
rgb_image_data = rgb_image.get_data();

imageArrayB = rgb_image_data(1:3:end);
imageArrayG = rgb_image_data(2:3:end);
imageArrayR = rgb_image_data(3:3:end);

imageMatrixB = rot90(flip(reshape(imageArrayB, [rgb_image.get_width(), rgb_image.get_height()])));
imageMatrixG = rot90(flip(reshape(imageArrayG, [rgb_image.get_width(), rgb_image.get_height()])));
imageMatrixR = rot90(flip(reshape(imageArrayR, [rgb_image.get_width(), rgb_image.get_height()]));
```

## 2. Point cloud data

The output of point cloud data requires Depth information.

```
%% 点云数据
% link: https://github.com/IntelRealSense/librealsense/blob/development/wrappers/matlab/depth_to_pointcloud.m
% Produce with depth data
% Produce pointcloud

if (depth.logical())    % && color.logical()
    % pointcloud.map_to(color);
    points = pointcloud.calculate(depth);

    % 存储至.ply格式
    points.export_to_ply(strcat(folder_project, num2str(ID_Station), '_点云.ply'));
end
```

## 3. IMU data

Agree 1 1 comment share like collect Apply for reprint ...

The export of IMU data is the most difficult.

First of all, IMU data needs to be collected continuously, while RGB+D are collected in frames.

```
%% 采集IMU数据
% link: https://www.programmersought.com/article/23264058748/
% link: https://github.com/IntelRealSense/librealsense/issues/5628
% first_or_default 函数:
imu_accel = fs.first_or_default( RS2_STREAM_ACCEL );
imu_accel_data = imu_accel.get_motion_data();
imu_gyro = fs.first_or_default( RS2_STREAM_GYRO );
imu_gyro_data = imu_gyro.get_motion_data();
```

知乎 @若谷

In any case, the problem was finally solved. Hope this function is useful to everyone.

```
function Get_Capture_Depth_RGB_IMU( Time_Prep, folder_project, ID_Station )
% 功能: 在Get_Capture_Depth_RGB_IMU的基础上, 升级
% 在Time_Prep秒之后, 连续采集IMU数据, 但RGB和Depth数据, 每隔0.1s采集一帧。
% steps:
% 架设安装设备, 开机, 等待启动自动化过程;
% 电脑端, 启动数据采集程序, 跳过前面Time_Prep秒;
% 电动云台, 按下启动转动按钮;
% 电脑端程序, 在Time_Prep秒之后, 开始采集数据, 包括: 连续的IMU数据, 和10Hz的RGBD影像数据;
%
% Input: Time_Prep(前期跳过的秒数)、folder_project (当前观测点的文件夹路径)、ID_Station(
% Output: 输出RGB、Depth、IMU, 存进文件夹
% example:
% {有效连接设备后} Get_Capture_Depth_RGB_IMU( 4, './project2\ ', 2 )
% folder_project = './lmars_gen\';
%

What should I do if RS2\_STREAM\_ACCEL is not defined?
