## Pandoc Configuration and Support Files

<https://github.com/kjhealy/pandoc-templates>

A collection of support files for use with Pandoc, and specifically for helping to turn pandoc markdown files into nice HTML, LaTeX, and

PDF output.

## Panwriter \*\*\*\*\*

Under active development.

<https://github.com/mb21/panwriter/releases>

## PanWriter is a distraction-free markdown editor with two unique features:

1. Tight integration with pandoc for import/export to/from plenty of file formats (including HTML, docx, LaTeX and EPUB).
2. Preview pane that can show pages – including page breaks etc. Layout adjustments are done in-file using CSS, and are immediately reflected in the preview.
