

```
const driveToyota = (c: Toyota) => { /* ... */ };
```

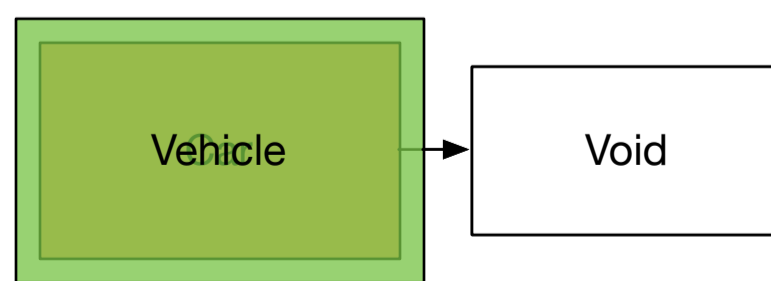

```
const driveVehicle = (c: Vehicle) => { /* ... */ };
```

```
function driveThis(f: (c: Car) => void): void { /* ... */ }
```

`driveVehicle` covers (accepts) all of the inputs  
`driveThis` may supply to the `c` function

`driveToyota` doesn't cover (accept) all of the inputs  
`driveThis` may supply to the `c` function
